**Subject: Westside Water Association, DOH PWS ID #94950
Small Water System Management Plan, ODW Project #20-1013
Addendum No. 1**

Dear Brietta and Jae,

We would like to make two corrections on the Westside Water Association Small Water System Management Plan that had an Engineer stamp dated April 19, 2021. Please see the corrections noted below:

Item 1: On Page 1, under the PWS 949500 number, add "**King County Franchise Number 1030**".

Item 2: On page 52, change references in the first full paragraph from 245 to 259, so that the paragraph now reads:

*WWA has completed the purchase of a newly drilled private well. The submittal for Source Approval of the Back 40A Well was submitted separately and approved by DOH with the understanding that WWA will submit this SWSMP planning document. With the approval of this additional source, the ability of Westside Water to resolve not only a historical problem of being oversubscribed by 6 connections but also to provide for as many as **259** total connections within its Service Area is very likely. The following review of system production capacity, historical usage and accompanying chart present the rationale for increasing the number of connections granted to the system to **259**.*

If you have any questions about these corrections or the SWSMP, please feel free to contact Doug Dolstad at iwm.1@juno.com/ phone: 206-715-3805 or Jim Gross at jim.gross@bhccconsultants.com/ phone: 206-979-2837.

Sincerely,

James Gross, P.E., PMP
